

Orbit

Your marketing team's
next AI teammate.

A closed-loop campaign agent that reads
customer data, operates your existing
Bloomreach setup, and creates entire
campaigns from scratch — with a human at
every customer-facing step.

Track 6 - Cross-MCP Orchestration

Team Rohlik

to navigate

Space

to advance

not enough hours.

02 / 08

Discovery is manual

Finding a real revenue opportunity in Bloomreach takes hours of EQL, funnel analysis, consent checks, and scenario auditing — before any campaign brief is even drafted.

The cycle is fragmented

Discover → build → send → measure → iterate. Each step lives in a different tool, owned by a different person. The loop breaks every handoff. Insights expire.

ORBIT'S THESIS

thin tools + rich agent knowledge = leverage.

Two MCP surfaces. Two trust levels. One human gate each.

03 / 08

Orbit interrogates Loomi Connect MCP — event schema, EQL analytics, consent settings, scenario list — to diagnose a real revenue opportunity. Not one canned query. Real diagnosis.

LOOMI CONNECT MCP - 5 OF 81 TOOLS USED

- `execute_analytics_eql` funnel analysis
- `get_event_schema` data model
- `get_customer_property_schema` attribute map
- `list_scenarios` existing campaigns
- `get_consent_settings` compliance check

HUMAN IN THE LOOP

Gate 1 — the agent stops and asks.

Before a single customer is touched, Orbit presents a structured campaign brief and waits. The marketer reads it, approves, and only then does execution begin.

"Gate 1 — the agent stops for human approval."

RESPONSIBLE AI NOTE

Sandbox / synthetic data only — no real customers. Discovery runs on PII-masked aggregates. RFM tier is a transparent heuristic, not an ML model. Agent only acts after human approval.

A deliberately thin write-MCP. Four tools.
Orbit sets a customer property, verifies it
landed, triggers the win-back scenario,
and reads back the result — a real send.

BLOOMREACH-MCP • 4 TOOLS • SEQUENCE

- ① `set_customer_property` → WB20
- ② `read_customer_attributes` verified ✓
- ③ `trigger_scenario` enqueued
- ④ `read_customer_events` delivered → opened

The screenshot shows the Orbit MCP interface with a sidebar on the left listing various tools and a main panel on the right displaying a sequence of operations. The sidebar includes a 'Filter conversations...' section with a dropdown menu set to 'Unopened'. Below this, a list of tools is shown, including 'Orbit Demo (fork) (fork)', 'Orbit Demo (fork) (fork) (to...', 'Orbit Demo (fork) (fork) (to...', 'Orbit Demo (fork) (fork) (to...', 'Orbit Demo (fork) (fork) (to...', 'keep acquiring customers...', 'A Demo', 'Orbit Demo (fork) (fork) (to...', 'keep acquiring customers b...', and 'keep acquiring customers b...'. The main panel is titled 'SLOT 4 • OPERATE' and contains a list of steps: 'Step 1 — Trigger the scenario (~15 seconds after verified write)', 'Step 2 — Verify the send (~60 seconds after triggered)', and 'Step 3 — Verify the status'. Below these steps, a message box states: 'That's the complete sequence. One recipient. No loops. No surprises.' At the bottom, a 'Message Orbit...' input field is visible.

write-MCP tools

real send

delivered + opened

"A real send through a thin write-MCP."

a full multi-step scenario, and the email itself. The thin MCP stays dumb. All intelligence lives in Orbit's skills.

WHAT ORBIT CREATES FROM SCRATCH

- 1 Audience filter in EQL — cohort definition
 - 2 Multi-step scenario JSON: send → wait 2 days → branch on open → follow-up
 - 3 Authored email: subject, preview, full HTML body
 - 4 Scenario JSON validates: PASS 
-  Gate 2 — human pastes + activates in Bloomreach UI

"From one sentence to an importable campaign."
